

EcoCosy® Wood-based Cellulosic Fibre · Nonwoven

Natural and friendly to skin

Pure

- Natural, outstanding moisture absorption, 100% sourced from well managed certified wood plantation
- Gentle and skin-friendly, 100% bio-based certified
- Fully biodegradable and free from harmful substance

Caring

- Ultra soft and close to skin, smooth and breathable
- Care from planting to environmental protection, we ensure responsible stewardship

Safe

- Transparent and Traceable
- Authoritative international certifications

EcoCosy® A touch of Nature

Whole-process sustainable management

Sustainable management plantations

Dissolved pulp from 100% international certified woods.

Bio-based products

100% bio-based products certified by USDA (United States Department of Agriculture), free of petroleum derivatives.

World-leading fibre production management and control

The best practical model of sustainable production with level-3 (top-level) Swiss STEP by OEKO-TEX® certification.

Strictly complying with ZDHC Wastewater Guidelines to minimize the impact on environment. Higg Index FEM 3.0 scored 90% in average which leads the sustainable environmental management in fibre manufacturing.

Swiss STANDARD 100 by OEKO-TEX® certified, eco-environmental protection, free from harmful substances, reaching the safety level of infants.

With the product raw material secured by OEKO-TEX® MADE IN GREEN, manufacturing high-standard products satisfying the environmental protection and security requirements, and undertaking social responsibilities.

Fully biodegradable

With reliable compostable degrading "Seedling" certificate, the products can be bio-degraded fast in 90 days without harmful substance.

Having obtained American BPI (Biodegradable Products Institute) industrial compostable label certificate.

* Tested with 100% EcoCosy fibre wipes.

Safe and reliable products

Having passed the American FDA (Food and Drug Administration) certification, the REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) test, and the Enstain biological safety certification, the products are safe, reliable and free of cytotoxicity and sensitization.

* Tested with 100% EcoCosy fibre wipes.

EcoCosy®
优可丝® Fresh

— ENJOY THE FRESH, PURE AND NATURAL —

— ENJOY THE FRESH, PURE AND NATURAL —

EcoCosy® Fresh 优可丝® Fresh

Under strict odor management and control, the EcoCosy Fresh™ fibre, from internationally certified plantations, are more pure and much fresher. Besides the properties of fast moisture absorption, thickness and softness, resistance to stretching, anti-pilling, and biodegradability the non-woven fabrics made by such fibre also are free of unpleasant odor and additives and are not allergized, therefore, they can satisfy with the consumers' needs of disposable products of skin care.

Less unpleasant odor and much fresher

By integrating strict odor management from the raw materials with EcoCosy® odor laboratory, we continuously monitor and improve the products, therefore, the odor factor on EcoCosy Fresh™ fibre is only about 10% of that on the similar products, almost no odor factor was detected.

EcoCosy Fresh™ fibre is usually used in the daily necessities that would directly contact facial skin. When using such daily necessities, consumers are very sensitive to the odor of the non-woven fabrics, and, the common non-woven fabrics from the market may give off heavy odors after being soaked in warm water.

Odor factor test

* The results of odor factor test carried out by third party on EcoCosy Fresh™ fibre and similar products 1 and 2 are as below.

检测项目	检测结果
异味	无

*According to the results of the independent test carried out by the third party, EcoCosy Fresh™ fibre is free of unpleasant odor.

According to the usage feedback from the brand consumers, after using EcoCosy fibre, the odor issue of cotton towel has been significantly improved.

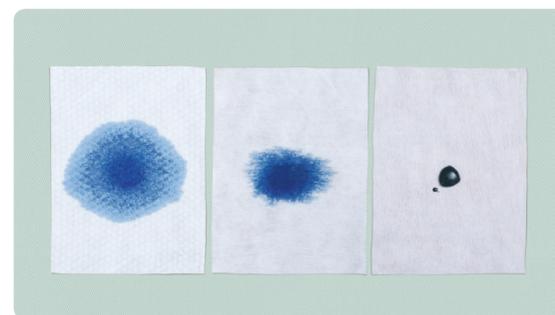

- “ No odor, soft, gentle, non-irritating, I'll buy again ”
- “ No odor, very good. ”
- “ No irritating odor ”
- “ The texture is soft, it doesn't lose scraps, no unpleasant odor. The quality is very good. ”
- “ The texture is very good, and it is durable, free of unpleasant odor, and soft ”
- “ The thickness is moderate and it is free of unpleasant odor. I'll buy again. ”

With the unique odor management technology, EcoCosy Fresh™ fibre has little odor factors and chemicals as tested, and without unpleasant odor in using, consumers will have great experiences.

Fast absorbing, fresh, and soft

When it is dry, the EcoCosy Fresh™ has high water-absorbing quality. With regard to water absorption rate, EcoCosy Fresh™ fibre is better than cotton non-woven fabrics, and as tested, its water absorption rate is 3 times of that of cotton non-woven fabrics. For the use of dry wipes, water absorption rate is an important property, however, the non-woven fabrics made by polyester fibre do not absorb water nearly. And with regard to water diffusion, the water in EcoCosy Fresh™ non-woven fabrics diffuses evenly, 3 times of that of cotton non-woven fabrics.

When choosing face towel or baby cotton towel, good water absorption is an important aspect. Consumers would like to choose face towel or baby cotton towel that can fully absorb water fast so that it will be full of water when touching skin and can wipe much clearer and fresher, without uncomfortable feeling of roughness.

EcoCosy Fresh™ non-woven fabric Cotton non-woven fabric Polyester non-woven fabric

Thick and durable with efficient tenacity

With unique material formula and EcoCosy® fibre's special groove structure, the EcoCosy Fresh™ fibre, originated from natural woods, have more compact fibre, and compared with cotton fibre, EcoCosy Fresh™ fibre have greater fibre cohesion.

Compared with natural cotton fibre, EcoCosy Fresh™ fibre is **much purer, longer and even**. The length of the common EcoCosy Fresh™ fibre is 40mm, 1.5 times of the length of common cotton fibre, and can be customized. Due to the growth cycle, growing environment and other factors, the cotton has different lengths. Therefore, with better knitting and anti-pilling-and-flaking, EcoCosy Fresh™ fibre is good for manufacturing non-woven fabrics of big weight and thickness and are the best alternative of high-end towels.

Cotton fibre length

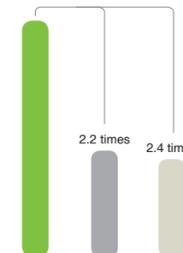

EcoCosy fibre length

EcoCosy Fresh™ non-woven fabric is much thicker and solidier

According to the non-woven fabric production test, when producing non-woven fabrics of same gram weight under the same water pressure with EcoCosy Fresh™ fibre and common cellulosic fibre separately, the thickness of the non-woven fabric produced by EcoCosy Fresh™ fibre is 3%-5% higher.

Cross strength test comparison

- EcoCosy Fresh™ non-woven fabric
- Polyester non-woven fabric
- Cotton non-woven fabric

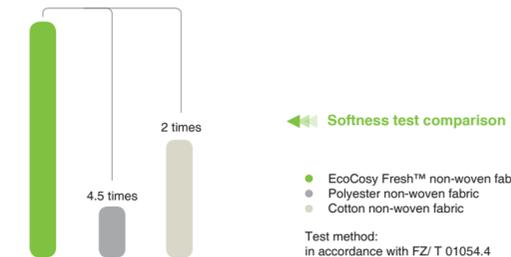

Test method: in accordance with GB / T 24218.3-2010

The result of the test carried out by third party is as shown in the diagram. The cross strength of EcoCosy Fresh™ non-woven is 2.4 times and 2.2 times of that of cotton non-woven fabric and polyester non-woven fabric separately.

No matter it is pulled transversely or longitudinally, the resistance to pulling is good, even though the fabric is wet. And after repeated rubbing and using, its surface is still flat and anti-pilling, and it is available for repeated using.

Softer than Cotton

The non-woven fabrics made by EcoCosy Fresh™ fibre have better texture than cotton and are soft, smooth and fitting.

Softness test comparison

- EcoCosy Fresh™ non-woven fabric
- Polyester non-woven fabric
- Cotton non-woven fabric

Test method: in accordance with FZ/ T 01054.4

The result of the test carried out by third party is as shown in the diagram. The softness of EcoCosy Fresh™ non-woven is 2 times and 4.5 times of that of cotton non-woven fabric and polyester non-woven fabric separately.

The infant child safety + Food-grade safety

EcoCosy Fresh™ fibre has passed the Standard 100 by OEKO-TEX® test for category I products, and this shows that EcoCosy Fresh™ fibre conforms to the latest provisions on textile ecology set in the Standard for baby products and the REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) requirements. Otherwise, as EcoCosy Fresh™ fibre has passed the America FDA test, it's assured that it has food-grade quality.

No Additives and Non-allergized

During the production process of EcoCosy Fresh™ fibre, no any fluorescent whitening agent is added, and as tested, the fabrics made by EcoCosy Fresh™ fibre has no residual fluorescent whitening agent.

As EcoCosy Fresh™ fibre, originated from 100% certified woods, have passed the bio-based product certification by USDA (United States Department of Agriculture), haven't added any petroleum derivatives, and have passed Enstain biological safety certification, it's assured that the EcoCosy Fresh™ fibre is safe, reliable, and non-allergic.

Non-irritating and non-allergic Natural bacteriostasis
